# NEW InhaLac<sup>®</sup> 160: MEGGLE extends inhalative lactose grade portfolio

**With InhaLac<sup>®</sup> 160 MEGGLE expands the product line of sieved lactose grades for dry powder inhalation.**

InhaLac<sup>®</sup> 160 is characterized by a median particle size of approximately 110 µm which ranges between the coarser lactose InhaLac<sup>®</sup> 120 and the finer lactose InhaLac<sup>®</sup> 230. This excipient exhibits a narrowly distributed particle size with a fines content (particles below 15 µm) of 3%.

### Benefits

- Dedicated production process
- Highly controlled powder characteristics
- Highest microbial quality including low endotoxins
- Retests after 24 months

### Application

InhaLac<sup>®</sup> 160 as a sieved lactose is suitable for use in pulmonary and nasal drug delivery.

### Résumé

- Middle sized sieved lactose
- MEGGLE´s extension of the InhaLac<sup>®</sup> product family – closing the gap of coarse sieved lactose grades for dry powder inhalation
